that doesn't exist in a flat world. A non-Euclidean geometry is a rethinking and redescription of the properties of things like points, lines, and other shapes in a non-flat world. Spherical geometry—which is sort of plane geometry warped onto the surface of a sphere—is one example of a non-Euclidean geometry. Non-Euclidean

Non-Euclidean geometry - Wikipedia

Non-Euclidean geometry is any type of geometry that is different from the “flat” (Euclidean) geometry you learned in school. It’s a set of geometries where the rules and axioms you are used to get broken: parallel lines are no longer parallel, circles don’t exist, and triangles

Elliptic geometry. Elliptic geometry is a non-Euclidean geometry with positive curvature which replaces the parallel postulate with the statement "through any point in the plane, there exist no lines parallel to a given line." In order to achieve a consistent system, however, the basic axioms of neutral geometry
