Transcription. The process of copying a sequence of DNA to produce a complementary strand of RNA. RNA polymerases. Enzymes that bond nucleotides together. Similarities of transcription and replication. Both occur within nucleus. Both are catalyzed by large, complex enzymes. Both involve unwinding of the DNA double helix. Both involve complementary base pairing to DNA strand.

This Study Guide consists of approximately 56 pages of chapter summaries, quotes, character analysis, themes, and more - everything you need to sharpen your knowledge of Transcription. The following version of this book was used to create this study guide: Atkinson, Kate. Transcription. New York ...

### Transcription Summary & Study Guide

1. With the help of other proteins and DNA sequences, RNA polymerase recognizes the transcript start site of a gene. A large transcription complex consisting of RNA polymerase and other proteins assembles on the DNA strand and begins to unwind a segment of the DNA molecule, until the two strands separate from each other.

Transcription Study Guide. This study guide is a written version of the material you have seen presented in the transcription unit. The cell's DNA contains the instructions for carrying out the work of the cell. These instructions are used by the cell's protein-making machinery to create proteins. If the cell's DNA were directly read by the protein-making machinery, however, it could be damaged and the process would be slow and cumbersome.
