

**Week To Wicked: Installing the 6.2L LS3 Engine and T56 ...**

Electric power transmission is the bulk movement of electrical energy from a generating site, such as a power plant, to an electrical substation and is different from the local wiring between high-voltage substations and customers, which is typically referred to as electric power distribution. The interconnected network which facilitates this movement is known as a transmission line.

ELEC 453 - Microwave Engineering Fall Semester 2017 Home Work 1 1. A lossless transmission line of electrical length  $l = 0.35 \lambda$  and characteristic impedance of  $100 \Omega$  is terminated with a complex load impedance  $Z_L = 50 - j20 \Omega$ . Find the reflection coefficient at the load, the SWR on the line, and the input impedance to the line. 2. A radio transmitter is connected to an antenna having an ...
