Models of Mental
Health The World
Health Organization
defines 'mental health'
as: 'a state of well-
being in which every
individual realizes his
or her own potential,
can cope with the
normal stresses of life,
can work productively
and fruitfully, and is
able to make a
contribution to her or
his community.' There
are various different...

Models of Mental Health • Counselling Tutor

Mental illness does not mean the absence of mental health; it merely implies that the person, at present, lies at the negative end of the continuum. As a complement to the mental health continuum model, the 'Languishing vs. Flourishing' perspective came into the picture.

Healthcare Model

Mental health conditions the complex result of several factors. According to the biopsychosocial model, mental health is the result of many forces occurring at different which have a cumulative effect on the individual. These forces can be positive or negative. If the negatives outway the positives then a person could develop a mental illness.
