A light-emitting diode (LED) is a semiconductor light source that emits light when current flows through it. Electrons in the semiconductor recombine with electron holes, releasing energy in the form of photons. The color of the light (corresponding to the energy of the photons) is determined by the energy required for electrons to cross the band gap of the semiconductor.

Light-emitting diode - Wikipedia

In some provinces, all licensed Architects must have professional liability insurance if they wish to practice architecture. This insurance protects both the public and the Architect. As well, each province and territory has an "Architects Act" which regulates the practice of architecture.

LEED Green Associate Overview | Become a LEED GA | GBES

In 2009, Massachusetts became the first state to adopt an above-code appendix to the "base" building energy code-the "Stretch Code". The Stretch Code, which emphasizes energy performance, as opposed to prescriptive requirements, is designed to result in cost-effective construction that is more energy efficient than that built to the "base" energy code.
