TIP: AirBnB House Manuals and Welcome Letter Templates

Ferrocement has relatively good strength and resistance to impact. When used in house construction in developing countries, it can provide better resistance to fire, earthquake, and corrosion than traditional materials, such as wood, adobe and stone masonry. It has been popular in developed countries for yacht building because the technique can ...

Self-Reliance Handbook/Ferrocement Construction ...

Ferrocement or ferro-cement is a system of construction using reinforced mortar or plaster (lime or cement, sand and water) applied over an "armature" of metal mesh, woven expanded-metal or metal-fibers and closely spaced thin steel rods such as rebar. The metal commonly used is iron or some type of steel. The cement is typically a very rich mix of cement and sand in a 3:1 ratio;

Flying Concrete ferrocement house. Ferrocement is resource efficient because it uses minimal rebar and concrete to produce 'thin shell' structures. The resulting curved members are somewhat similar to trees and plants. This is the opposite of straight concrete walls that rely on massive thickness to gain strength (and cost way more money).
