Java - What is OOP?

OOP stands for Object-  
Oriented Programming.

Procedural

programming is about  
writing procedures or  
methods that perform  
operations on the data,  
while object-oriented  
programming is about  
creating objects that

# Read Online Java Java Java Object Oriented Problem Solving

contain both data and methods. Object-oriented programming has several advantages over procedural programming:

## **Java OOP (Object-Oriented Programming)**

Wikipedia defines OOP as a: “programming paradigm based on the concept of objects, which may contain data, in the form of

# Read Online Java Java Java Object Oriented Problem Solving

Java is an Object-Oriented Language. As a language that has the Object-Oriented feature, Java supports the following fundamental concepts

- Polymorphism;
- Inheritance;
- Encapsulation;
- Abstraction; Classes;
- Objects; Instance;
- Method; Message Passing;

In this chapter, we will look into the concepts - Classes and Objects.

# Read Online Java Java Java Object Oriented Problem Solving

Object – Objects have states and behaviors. Example: A dog has states - color, name, breed as well as behaviors - wagging the tail, barking, eating.

Java is a class based object-oriented programming language, which means objects in Java are instances of classes.

Think of a class as a blueprint, and object as an instance of this blueprint. Object-oriented programming is based on 4 key principles - Abstraction, Encapsulation, Inheritance and Polymorphism.
