Soil formation, or pedogenesis, is the combined effect of physical, chemical, biological and anthropogenic processes working on soil parent material. Soil is said to be formed when organic matter has accumulated and colloids are washed downward, leaving deposits of clay, humus, iron oxide, carbonate, and gypsum, producing a distinct layer called the B horizon.

Some quick rules of thumb to decide on Spearman vs. Pearson: The assumptions of Pearson's are constant variance and linearity (or something reasonably close to that), and if these are not met, it might be worth trying Spearman's. The example above is a corner case that only pops up if there is a handful (<5) of data points.

How to choose between Pearson and Spearman correlation ...

Science Georgia Standards of Excellence Sixth Grade Standards

In short, science is replete with arguments that take place both informally, in lab meetings and symposia, and formally, in peer review. Historical case studies of the origin and development of a scientific idea show how a new idea is often difficult to accept and has to be argued for—archetypal examples are the Copernican idea that Earth ...
