The web page structure should be familiar if you've worked with web applications in the past. We start with a plain HTML5 + JavaScript application that has a DIV tag for the map display. We include the PubNub library for realtime communications in the HEAD of the HTML page.

### **Realtime Google Maps Geolocation Tracking with JavaScript ...**

I'll demo this concept by building a small app that sends a notification whenever someone pushes code to a GitHub repository. Realtime notifications are a feature of many modern web applications. When utilized properly, they can be a great way to inform users about new activity in your web app so that they don't miss it. Prerequisites

### **Use the HTML5 Notification API to provide realtime alerts**

In the book Realtime Web Apps with HTML5 WebSockets, PHP and jQuery, Jason Lengstorf and I step through the process of building a realtime application on the LAMP stack, from concept and design through development.
