In computing, a shared resource, or network share, is a computer resource made available from one host to other hosts on a computer network. It is a device or piece of information on a computer that can be remotely accessed from another computer, typically via a local area network or an enterprise intranet, transparently as if it were a resource in the local machine. Network sharing is made possible by inter-process communication over the network. Some examples of shareable resources are compute

Shared resource - Wikipedia

Sharing of resources between processes and threads is the source of most of the difficulties of concurrent programming. The word "sharing" is also used in some functional programming communities to refer specifically to sharing of memory between different data items to save space, otherwise known as hash consing.
