Polybutene is an organic polymer made from a mixture of 1-butene, 2-butene, and isobutylene. Ethylene steam cracker C4s are also used as supplemental feed for polybutene. It is similar to polyisobutylene (PIB), which is produced from essentially pure isobutylene made in a C4 complex of a major refinery. The presence of isomers other than isobutylene can have several effects including: 1) lower ...

PAG- and PAO-based lubricants are used in multiple industries and, as synthetics, offer improved performance over mineral oils. Both lubricant types are used in industrial gearboxes, compressors ...

Understanding PAG- and PAO-Based Lubricants

Sunlight, moisture, and oils from human skin cause all fibers to break down and wear away. Natural fibers tend to be much more sensitive than synthetic blends. This is mainly because natural products are biodegradable. In general, synthetic fibers are created by extruding fiber-forming materials through spinnerets into air and water, forming a ...

Super Cal Plus - Young Living Essential Oils

Mineral oils are the least refined of the three, which means they cost less, but also provide less protection, performance and economy than the other options. Part synthetic motor oils are a blend of mineral oil and synthetic oil, to give added performance, but still at a lower cost than full synthetic motor oils. Full synthetics are the most ...
