In short, to create this list, I used the following Unix cut command, specifying the desired field number and field delimiter: \$ ls -l | cut -f1 -d'.' This command can be read like this: Create a single column list of all files in the current directory. From that list, only print the first field of each filename, where the field delimiter is ...

How to use the Linux cut command with a field and ...

In Unix and Unix-like operating systems, job control refers to control of jobs by a shell, especially interactively, where a "job" is a shell's representation for a process group. Basic job control features are the suspending, resuming, or terminating of all processes in the job/process group; more advanced features can be performed by sending signals to the job.

Advanced C Shell - Computer Science

C Shells and Bourne Again Shells A Unix shell is just the interpreter that adds a more human interface to the Unix operating system. Graphical desktop environments have supplanted many of the commoner applications of these shells, but if you're logging in from home the Unix shell is your primary interface. Get comfortable with it.
